

Abrar Islam

Backend Engineer | Java | Spring Boot | Kafka | Distributed Systems
Bangalore, India | 9127571248 | abrarofficial3497@gmail.com
LinkedIn | GitHub | Portfolio

Technical Skills

Languages	Java 17/21, SQL, JavaScript
Backend	Spring Boot, Microservices, REST APIs, JPA/Hibernate
Distributed Systems	Kafka, Event-Driven Architecture, Async Processing, Consumer Groups, Partitioning
AI Systems	LLM API Integration, Async AI Workflows, SLA Handling
Databases	MongoDB (Indexing, Performance Tuning), MySQL, PostgreSQL, Oracle DB
Tools	Docker, Jenkins, AWS, Grafana, Git, CI/CD
Core Concepts	System Design (HLD/LLD), API Design, Concurrency, Multithreading, Scalability, Data Structures

Experience

SDE 2, Backend Engineer — CoffeeBeans Consulting (Piramal Finance) Apr 2025 – Present

Built scalable backend workflows for an AI-driven fraud validation platform at a leading NBFC using Java, Kafka, Spring Boot, and MongoDB.

- Designed and developed backend workflows for AI-led fraud validation and sampler recommendation systems using Java, Spring Boot, Kafka, and MongoDB.
- Resolved a Kafka race condition causing concurrent processing of the same case by implementing hybrid execution (sync for same-case events, async otherwise), eliminating consumer lag during restart.
- Resolved a production defect causing infinite case re-initiation due to applicant ID mismatches while preserving downstream billing and TAT calculations.
- Re-architected synchronous API workflows into Kafka-driven event pipelines using dedicated request/response topics, enabling asynchronous execution and independent service scaling.
- Built an AI integration layer connecting internal and third-party LLM services with SLA handling and stale-response invalidation to maintain workflow consistency.
- Reduced MongoDB query latency by **60–80%** through compound indexing, enabling cluster downgrade from M30 to M10 and reducing infrastructure cost by **~70%**.
- Re-architected document workflows and migrated API gateway from Apigee to NGINX with routing, authentication, role-based access, and HLD/LLD documentation for scalable backend workflows.

Associate Software Engineer — Wissen Technology

Nov 2023 – Jan 2025

- Automated enterprise ticket workflows, improving issue resolution efficiency by **90%**.
- Contributed to migration of legacy Ruby services to Java Spring Boot microservices, ensuring stable rollout and post-migration reliability.
- Built backend services for the WiseEngage platform using Java, Spring Boot, MySQL, and Microservices.
- Improved backend maintainability through REST API development and **90%+** unit test coverage.

Software Engineer — Manhattan Associates

Jul 2021 – May 2023

- Developed backend microservices and Spring Boot modules for warehouse management systems supporting large-scale supply chain operations.
- Built scalable APIs and backend workflows supporting high-volume warehouse operations.
- Led go-live support and collaborated with clients to deliver customized backend solutions.
- Designed SQL view tables integrating Machine Handling Equipment (MHE) systems into warehouse workflows.

Education

B.Tech — Computer Science and Engineering

Jul 2017 – Jun 2021

SRM Institute of Science and Technology, Chennai

83.26%
